Ladder Tilt

You don't need a ladder to get your load onto the roof when using this product

Loading a ladder onto a car roof entails risk both to your back and the paintwork of the car. This sliding ladder holder is the perfect solution for making loading both easy and safe. The holder is unlocked, pulled out and angled downwards to the side of the car. From that position the ladder can be easily fitted. The carrier is then effortlessly lifted back onto the roof, to be secured in place. A truly ergonomic solution, and a great timesaver.

Benefits

- Minimum effort required during loading
- No need to reach the top of the vehicle to secure the ladder
- Timesaving
- Ergonomic
- Adjustable ladder fastening adapts to most ladder sizes

Features

- Updated tilting function and xtender function
- Easy fastening
- 4 load stops and ladder fastening included
- Ladder Pin Adapter 310 available for when ladder pin/ladder attachment do not correspond
