

MULTI MIRROR™

Mounts Into Most Flat Handlebar Ends

Part# 2041494

STEP ONE: Expose end of handlebar. If bars have removeable plug, remove. If bars do not have removeable plug, cut a hole in the end of the grips.

STEP TWO: Insert expander plug on mirror into end of bar as far as it will go.

STEP THREE: Twist knob on end of expander plug until mirror is locked in place. If it will not lock in place use adapter sleeve provided.

STEP FOUR: To adjust, loosen mirror tension by holding mirror in one hand while rotating lock ring clockwise with the other hand. Hold mirror in place while retightening lock ring.

WARNING: Objects in the mirror are closer than they appear. Road vibrations or rough terrain may loosen ball joint or strap. Check tension frequently.
