

Bottle Ombra

Technical specs:

- _ capacity: 550 ml – 750 ml – 950 ml
- _ diameter: 74 mm
- _ total height: 210 mm (550ml), 240 mm (750 ml), 270 mm (950 ml)
- _ dishwasher safe (T max = 40°C)
- _ max liquid temperature 40°C

Materials:

- _ bottle body: Food-grade polyethylene
- _ cap: Food-grade polypropylene and food-grade thermoplastic rubber

Features

New design:

The bottle features an all-new sports design built around the standard 74mm diameter that fits all traditional bottle cages on the market. The lower portion of the bottle body is designed to increase stability during racing and to dampen the vibrations that occur between bottle and bottle cage; thereby ensuring a perfect grip under all conditions, such as rocky roads, descents and high-speed off-road sections.

New cap:

- _ Membrane valve technology
- _ The new cap features a bigger and softer nozzle designed to easily increase liquid flow; it is also odorless and will not alter liquid taste.
- _ Ideal for competition with three exclusive features:
 1. Larger push-pull soft rubber nozzle that makes it super ergonomic and easier to open/close during racing;
 2. Twist-off opening for easier cleaning and refilling;
 3. Snap-fit safety opening minimizes potential damage should it ever come into contact with wheels.

Squeezable: bottle body is soft and liquid flows easily by just a light squeeze.

Food safety: bottle is consistent with the European CE and American FDA standards concerning food contact materials.

BPA Free: bottle materials are totally BPA-free (Bisphenol A).

Great capacity: bottle is compact yet features the high liquid capacity important to competitors.

Recyclability: all materials are 100% recyclable through normal recycling.
