

# Bottle Vero 700 ml

**Technical data:**

- \_ diameter: 74 mm
- \_ height: 245 mm
- \_ capacity 700 ml

**Construction materials:**

- \_ water bottle main body: Tritan polyester
- \_ cap: Polyamide and silicon

**Colours:**

- \_ available in four different colours: red, smoky grey, transparent, blue

**Characteristics of the waterbottle:**

\_ **suitability for food products:** manufactured with Tritan, the bottle is completely safe for contact with all food products or beverages in compliance with current norms (European EC norms, American FDA norms, Canada, Japan and China regulations).

\_ **Maximum transparency:** the crystal clear transparency of the waterbottle is similar to that of the highest quality glass containers, but with less weight, higher strength and superior safety of use than glass (particularly meaningful when used during activity or by children).

**ELITE**

DESIGN &amp; PERFORMANCE

\_ **Very hygienic:** Cleaning and long-term maintenance of a Tritan water bottle is much simpler and more effective than plastic waterbottles currently on the market.

\_ **BPA Free:** the water bottle is entirely free of BPA (Bisphenol A) and other bisphenols (BPS).  
In compliance with the most recent international regulations, it is also EA free, and does not interfere with the function of estrogens and androgens present in the human body.

\_ **Preservation of taste:** the materials used to make containers for beverages often alter the smell or taste of the liquid contained, particularly in case of hot liquids.

The Tritan used by Elite in the manufacture of this bottle does not alter in any way the organoleptic characteristics of the liquid contained, and the original taste of the contents is preserved for long periods.

\_ **Strength and durability:** the high resistance of Tritan to impact, and the very latest in production processes ensure the long-term strength and durability of the water bottle.

\_ **Wide mouth:** the large opening of the water bottle means filling the bottle is quick and easy even when ice cubes are used with beverages. The large mouth also eases cleaning.

\_ **New outdoor cap:** particularly suitable for outdoor use, the outdoor cap includes a stainless steel hook for transportation and is equipped with an ergonomic dispenser that ensures the following:

1. tight seal when in the closed position;
2. easy opening by rotating the dispenser;
3. high liquid flow when in the open position.

\_ **Compatibility with waterbottle holders:** the external diameter of the water bottle is 74 mm, equivalent to that of traditional water bottles, making it widely compatible with water bottle holders currently available.

\_ **Dishwasher safe:** the materials used have exceptional resistance to machine dishwashing, even at high temperatures.
